Anti-LMP1 [H3] Bulk Size, 1 mg, Ab00761-10.3-BT View online

## Anti-LMP1 [H3] Bulk Size Ab00761-10.3-BT

This antibody was created using our proprietary Fc Silent<sup>™</sup> engineered Fc domain containing key point mutations that abrogate binding to Fc gamma receptors.

This full-length, reformatted human antibody was made using the variable domain sequences of the original Human scFv format, for improved compatibility with existing reagents, assays and techniques.

Isotype and Format: Human IgG1, Fc Silent<sup>™</sup>, Kappa

Clone Number: H3

Alternative Name(s) of Target: latent membrane protein 1; LMP1; LMP-1; p63; protein p63; protein p25 UniProt Accession Number of Target Protein: P03230

Published Application(s): inhibit, IP, ELISA, IF

Published Species Reactivity: Epstein-Barr virus (EBV)

**Immunogen:** H3 was selected by its affinity for GST-LMP1 from a human phage display library after 4 rounds of panning.

**Specificity:** H3 scFv is specific to the LMP1 C terminal region where it binds to CTAR-1 (GST-LMP1[187-242]). LMP1 is expessed constitutively in many EBV-associated tumours and this protein can cause B lymphocyte and rodent fibroblast transformation, cell apoptosis inhibition by up-regulation of anti-apoptotic proteins, cell surface marker and DNA methyltransferase activty up-regulation, and cell adhesion molecule and cyclin-dependent kinase downregulation. The C-terminal domain of LMP1 is made up of 3 C-terminal activating regions (CTARs) which interact with TNF receptor-associated proteins and TNF receptorassociated death domain protein, which medite activation of NF-kB and AP-1. A LMP1 TAR is also involved in the JAK/STAT pathway.

**Application Notes:** H3 scFv can reduce LMP1-mediated NF-kappaB activation in HEK293 cells by ~50% as well as inhibit LMP1 functions in epithelial cells - enables the potential use of H3 for attenuating the LMP1 function in LMP1-positive tumors. H3 is also capable of reducing the trans-membrane migration ability of MDCK-LMP1 cells by blocking the CTAR-mediated signaling pathway. H3 can also be used to pull down LMP1 in IPs, and can be used for ELISAs and to visualise LMP1 distibution in IF studies.

**Antibody First Published in:** Fang et al. Modulation of Epstein-Barr virus latent membrane protein 1 activity by intrabodies. Intervirology. 2007;50(4):254-63. Epub 2007 Apr 25. PMID:17460414 **Note on publication:** Describes the generation of and characterization of a number of scFvs specific for different regions of the LMP1 C terminal domain.

## **Product Form**

Size: 1 mg Purified antibody in bulk size.Purification: Protein A affinity purifiedSupplied In: PBS only.

**Storage Recommendation:** Store at 4°C for up to 3 months. Note, this antibody is provided without added preservatives, it is therefore recommed this antibody be handled under sterile conditions. For longer storage, aliquot and store at -20°C.

Concentration: 1 mg /ml.

Important note – This product is for research use only. It is not intended for use in therapeutic or diagnostic procedures for humans or animals.
