Anti-Cytotoxin 1, 3, 7 [TPL0027_01_F7] Bulk Size Ab01642-10.183-BT

This antibody contains LALA mutations to silence Fc gamma receptor binding and reduce complement binding. It also contains YTE mutations to increase half-life via FcRn interaction.

This full-length, reformatted human antibody was made using the variable domain sequences of the original Human scFv format, for improved compatibility with existing reagents, assays and techniques.

Isotype and Format: Human IgG1 LALA+YTE, Fc Silenced & half-life extended, Kappa

Clone Number: TPL0027_01_F7

Alternative Name(s) of Target: CTX1,3,7; CX1; Cardiotoxin F8; Cardiotoxin-I; CTX-I; Toxin CM-6; Cytotoxin 3; CX3; Toxin CM-7; Cytotoxin 7; Toxin CM-4B

UniProt Accession Number of Target Protein:

Published Application(s): ELISA

Published Species Reactivity: *Naja nigricollis*

Immunogen: The antibody was raised using IONTAS phage display library, a naïve human scFv library consisting of $4.0 \cdot 10^{10}$ unique antibody fragments. Through phage display selection, scFv-presenting phages were allowed to bind a toxin, phages with unspecific binding were washed away, and the rest were eluted through enzymatic digestion. These were then amplified and used for the following round. In total three rounds of selections were completed leaving the best binders behind.

Specificity: TPL0027_01_F7 antibody recognizes cytotoxins 1, 3 and 7, which are some of the major toxins in the venom of the black-necked spitting cobra (*Naja nigricollis*).

Application Notes: TPL0027_01_F7 antibody has high affinity to the cytotoxins 1, 3 and 7. It was demonstrated by normalized ELISA, which circumvents the limitation of a simple ELISA by removing the expression variable, normalizing the amount of scFv in each well. The antibody's high affinity was confirmed by its ability to bind the target proteins in a venom fraction even at 1:32,000 dilution ($3.125 \cdot 10^{-2}$ µg/mL (Jürgensen et al., 2019 [poster])). It is recommended for the research on the antitoxin against *Naja nigricollis* snakebites.

Antibody First Published in: Jürgensen et al. Harnessing monoclonal antibodies for development of a specific treatment against *Naja nigricollis* envenoming. 10.13140/RG.2.2.24771.14884. [PMID:](#)

Note on publication: This poster describes the generation and characterization of the TPL0027_01_F7

antibody among other antibodies directed against the venom toxins of *Naja nigricollis*.

Product Form

Size: 1 mg Purified antibody in bulk size.

Purification: Protein A affinity purified

Supplied In: PBS only.

Storage Recommendation: Store at 4°C for up to 3 months. Note, this antibody is provided without added preservatives, it is therefore recommended this antibody be handled under sterile conditions. For longer storage, aliquot and store at -20°C.

Concentration: 1 mg/ml.

Important note - This product is for research use only. It is not intended for use in therapeutic or diagnostic procedures for humans or animals.
