## Anti-HLA-DR [1D10 (Hu1D10; Apolizumab)] Standard Size Ab03369-23.0

This chimeric rabbit antibody was made using the variable domain sequences of the original Human IgG1 format for improved compatibility with existing reagents assays and techniques.

Isotype and Format: Rabbit IgG, Kappa

Clone Number: 1D10 (Hu1D10; Apolizumab)

**Alternative Name(s) of Target:** CD74; HLA class II histocompatibility antigen gamma chain; HLA-DR antigens-associated invariant chain; Ia antigen-associated invariant chain; I; p33

UniProt Accession Number of Target Protein: P04233

Published Application(s): IP, therapeutic, FC

#### Published Species Reactivity: Human

**Immunogen:** The original mouse antibody 1D10 was generated by immunizing female BALB/c mice intraperitoneally with human large cell lymphoma HO-85. Humanized version of this antibody was generated by grafting CDRs of the parental mouse antibody onto human framework regions.

**Specificity:** This antibody recognizes a variant epitope on the beta chain of HLA-DR. It can bind some but not all HLA-DR beta chains. The antigen that this antibody binds is expressed on lymphocytes, macrophages, and dendritic (mesenchymal) cells and on most B cell neoplasms. HLA-DR is an MHC class II cell surface receptor encoded by the human leukocyte antigen complex on chromosome 6 region 6p21.31. HLA-DR is also involved in several autoimmune conditions, disease susceptibility and disease resistance. The primary function of HLA-DR is to present peptide antigens, potentially foreign in origin, to the immune system for the purpose of eliciting or suppressing T-(helper)-cell responses that eventually lead to the production of antibodies against the same peptide antigen.

**Application Notes:** This antibody is the humanized version of anti-HLA-DR mouse parental antibody called 1D10. This antibody is capable of recognizing a majority of B-cell malignancies. This antibody is capable of inducing complement-mediated cytotoxicity, antibody dependent cell cytotoxicity and direct apoptosis of B cells expressing HLA-DR. The original mouse version does not posses these characteristics. This antibody has similar affinity to human HLA-DR as compared to its parental mouse antibody (PMID: 11477560). This antibody was also used for the generation of a bispecific antibody in combination with anti-CD3e antibody M291 (Visilizumab) (US6129914).

Antibody First Published in: Kostelny et al. Humanization and characterization of the anti-HLA-DR

antibody 1D10. Int J Cancer. 2001 Aug 15;93(4):556-65. PMID:11477560 Note on publication: This paper describes the generation and characterization of the humanized version of anti-HLA DR antibody 1D10.

### **Product Form**

**Size:** 200 μg Purified antibody. **Purification:** Protein A affinity purified **Supplied In:** PBS with 0.02% Proclin 300.

**Storage Recommendation:** Store at 4°C for up to 3 months. For longer storage, aliquot and store at - 20°C.

Concentration: 1 mg/ml.

Important note – This product is for research use only. It is not intended for use in therapeutic or diagnostic procedures for humans or animals.
