## Anti-Newcastle disease virus [Antibody A] Standard Size Ab03464-21.0

This antibody does not have a J-chain and therefore presents as a hexamer, rather than a pentamer.

This full-length chimeric mouse antibody was made using the variable domain sequences of the original Chicken scFv format for improved compatibility with existing reagents assays and techniques.

**Isotype and Format:** Mouse IgM, Lambda

**Clone Number:** Antibody A

**Alternative Name(s) of Target:** NDV; NCBI: 82692

**UniProt Accession Number of Target Protein:**

**Published Application(s):** WB, ELISA

**Published Species Reactivity:** Newcastle disease virus

**Immunogen:** The original antibody was isolated from a chicken derived single chain phage display library by screening against chicken Newcastle disease virus.

**Specificity:** This antibody recognizes and binds chicken Newcastle disease virus (NDV). NDV is an avian disease causing a deadly infection in many domestic and wild bird species; it is transmissible to humans. In humans, NDV causes mild flu-like symptoms or conjunctivitis and/or laryngitis.

**Application Notes:** The binding characterization of this antibody to chicken Newcastle disease virus was done using ELISA and western blot. This antibody does not cross react with bursal disease virus and avian influenza, Marek's virus and adenoviruses (CN101070541).

**Antibody First Published in:** [PMID:](#)

**Note on publication:**

### Product Form

**Size:** 100 µg Purified antibody.

**Purification:** Affinity Purified using a recombinant lectin column

**Supplied In:** PBS with 0.02% Proclin 300.

**Storage Recommendation:** Store at 4°C for up to 3 months. For longer storage, aliquot and store at -20°C.

**Concentration:**

1 mg/ml.

Important note - This product is for research use only. It is not intended for use in therapeutic or diagnostic procedures for humans or animals.
