## GFI1 FISH Probe

Catalog # : FA0041

規格 : [ 200 uL ]

List All

### Specification

<b>Product Description:</b>	Made to order FISH probes for identification of gene amplification using Fluorescent In Situ Hybridization Technique. ( <a href="#">Technology</a> )
<b>Supplied Product:</b>	DAPI Counterstain (1500 ng/mL ) 250 uL
<b>Storage Instruction:</b>	Store at 4°C in the dark.
<b>Origin:</b>	Human
<b>Source:</b>	Genomic DNA
<b>Notice:</b>	We <b>strongly recommend</b> the customer to use FFPE FISH PreTreatment Kit 1 (Catalog #: <a href="#">KA2375</a> or <a href="#">KA2691</a> ) for the pretreatment of Formalin-Fixed Paraffin-Embedded (FFPE) tissue sections.
<b>Regulation Status:</b>	For research use only (RUO)

### Gene Information

**Entrez GeneID:** [2672](#)

**Gene Name:** GFI1

**Gene Alias:** FLJ94509,GFI-1,ZNF163

**Gene Description:** growth factor independent 1 transcription repressor

**Omim ID:** [202700](#), [600871](#), [607847](#)

**Gene Ontology:** [Hyperlink](#)

**Gene Summary:** This gene encodes a nuclear zinc finger protein that functions as a transcriptional repressor. This protein plays a role in diverse developmental contexts, including hematopoiesis and oncogenesis. It functions as part of a complex along with other cofactors to control histone modifications that lead to silencing of the target gene promoters. Mutations in this gene cause autosomal dominant severe congenital neutropenia, and also dominant nonimmune chronic idiopathic neutropenia of adults, which are heterogeneous hematopoietic disorders that cause predispositions to leukemias and infections. Multiple alternatively spliced variants, encoding the same protein, have been identified for this gene. [provided by RefSeq]

**Other** OTTHUMP00000012582,OTTHUMP00000012583,growth factor  
**Designations:** independence-1,growth factor independent 1,zinc finger protein  
163,zinc finger protein Gfi-1
