### Gene Information

**Entrez GeneID:** [5468](#)

**Gene Name:** PPARG

**Gene Alias:** CIMT1,NR1C3,PPARG1,PPARG2,PPARgamma

**Gene Description:** peroxisome proliferator-activated receptor gamma

**Omim ID:** [137800](#), [151660](#), [601487](#), [601665](#), [604367](#), [609830](#)

**Gene Ontology:** [Hyperlink](#)

**Gene Summary:** This gene encodes a member of the peroxisome proliferator-activated receptor (PPAR) subfamily of nuclear receptors. PPARs form heterodimers with retinoid X receptors (RXRs) and these heterodimers regulate transcription of various genes. Three subtypes of PPARs are known: PPAR-alpha, PPAR-delta, and PPAR-gamma. The protein encoded by this gene is PPAR-gamma and is a regulator of adipocyte differentiation. Additionally, PPAR-gamma has been implicated in the pathology of numerous diseases including obesity, diabetes, atherosclerosis and cancer. Alternatively spliced transcript variants that encode different isoforms have been described. [provided by RefSeq]
