### Gene Information

Entrez GeneID: [320](#)

Gene Name: APBA1

Gene Alias: D9S411E,MINT1,X11,X11A,X11ALPHA

Gene Description: amyloid beta (A4) precursor protein-binding, family A, member 1

Omim ID: [602414](#)

Gene Ontology: [Hyperlink](#)

**Gene Summary:** The protein encoded by this gene is a member of the X11 protein family. It is a neuronal adapter protein that interacts with the Alzheimer's disease amyloid precursor protein (APP). It stabilizes APP and inhibits production of proteolytic APP fragments including the A beta peptide that is deposited in the brains of Alzheimer's disease patients. This gene product is believed to be involved in signal transduction processes. It is also regarded as a putative vesicular trafficking protein in the brain that can form a complex with the potential to couple synaptic vesicle exocytosis to neuronal cell adhesion.
