GFRA1 FISH Probe

Catalog # : FA0262

規格 : [200 uL]

[List All](#)

Specification

Product Description:	Made to order FISH probes for identification of gene amplification using Fluorescent In Situ Hybridization Technique. (Technology)
Supplied Product:	DAPI Counterstain (1500 ng/mL) 250 uL
Storage Instruction:	Store at 4°C in the dark.
Origin:	Human
Source:	Genomic DNA
Notice:	We strongly recommend the customer to use FFPE FISH PreTreatment Kit 1 (Catalog #: KA2375 or KA2691) for the pretreatment of Formalin-Fixed Paraffin-Embedded (FFPE) tissue sections.
Regulation Status:	For research use only (RUO)

Gene Information

Entrez GeneID:	2674
Gene Name:	GFRA1
Gene Alias:	GDNFR,GDNFRA,GFR-ALPHA-1,MGC23045,RET1L,RETL1,TRNR1
Gene Description:	GDNF family receptor alpha 1
Omim ID:	601496
Gene Ontology:	Hyperlink

Gene Summary: Glial cell line-derived neurotrophic factor (GDNF) and neurturin (NTN) are two structurally related, potent neurotrophic factors that play key roles in the control of neuron survival and differentiation. The protein encoded by this gene is a member of the GDNF receptor family. It is a glycosylphosphatidylinositol(GPI)-linked cell surface receptor for both GDNF and NTN, and mediates activation of the RET tyrosine kinase receptor. This gene is a candidate gene for Hirschsprung disease. Multiple alternatively spliced transcript variants have been described for this gene. [provided by RefSeq]

Other Designations: GPI-linked anchor protein,Glial cell line-derived neurotrophic factor receptor alpha,OTTHUMP00000020558,OTTHUMP00000020559,PI-

linked cell-surface accessory protein,RET ligand 1,TGF-beta related neurotrophic factor receptor 1
