FGF3 FISH Probe

Catalog # : FA0288

規格 : [200 uL]

List All

Specification

Product Description:	Made to order FISH probes for identification of gene amplification using Fluorescent In Situ Hybridization Technique. (Technology)
Supplied Product:	DAPI Counterstain (1500 ng/mL) 250 uL
Storage Instruction:	Store at 4°C in the dark.
Origin:	Human
Source:	Genomic DNA
Notice:	We strongly recommend the customer to use FFPE FISH PreTreatment Kit 1 (Catalog #: KA2375 or KA2691) for the pretreatment of Formalin-Fixed Paraffin-Embedded (FFPE) tissue sections.
Regulation Status:	For research use only (RUO)

Gene Information

Entrez GeneID: [2248](#)

Gene Name: FGF3

Gene Alias: HBGF-3,INT2

Gene Description: fibroblast growth factor 3 (murine mammary tumor virus integration site (v-int-2) oncogene homolog)

Omim ID: [164950](#), [610706](#)

Gene Ontology: [Hyperlink](#)

Gene Summary: The protein encoded by this gene is a member of the fibroblast growth factor (FGF) family. FGF family members possess broad mitogenic and cell survival activities and are involved in a variety of biological processes including embryonic development, cell growth, morphogenesis, tissue repair, tumor growth and invasion. This gene was identified by its similarity with mouse *fgf3/int-2*, a proto-oncogene activated in virally induced mammary tumors in the mouse. Frequent amplification of this gene has been found in human tumors, which may be important for neoplastic transformation and tumor progression. Studies of the similar genes in mouse and chicken suggested the role in inner ear formation. [provided by RefSeq]

Other INT-2 proto-oncogene protein,V-INT2 murine mammary tumor virus
Designations: integration site oncogene homolog, fibroblast growth factor 3, murine mammary tumor virus integration site 2, mouse, oncogene INT2
