### Gene Information

**Entrez GeneID:** [4591](#)

**Gene Name:** TRIM37

**Gene Alias:** KIAA0898,MUL,POB1,TEF3

**Gene Description:** tripartite motif-containing 37

**Omim ID:** [253250](#), [605073](#)

**Gene Ontology:** [Hyperlink](#)

**Gene Summary:** This gene encodes a member of the tripartite motif (TRIM) family, whose members are involved in diverse cellular functions such as developmental patterning and oncogenesis. The TRIM motif includes zinc-binding domains, a RING finger region, a B-box motif and a coiled-coil domain. The RING finger and B-box domains chelate zinc and might be involved in protein-protein and/or protein-nucleic acid interactions. The gene mutations are associated with mulibrey (muscle-liver-brain-eye) nanism, an autosomal recessive disorder that involves several tissues of mesodermal origin. Alternatively spliced transcript variants encoding the same protein have been identified. [provided by RefSeq]

**Other** RING-B-box-coiled-coil protein,tripartite motif-containing 37 protein
