### Gene Information

Gene Name: BCL6

Gene Alias: BCL5,BCL6A,LAZ3,ZBTB27,ZNF51

Gene Description: B-cell CLL/lymphoma 6

Omim ID: [109565](#)

Gene Ontology: [Hyperlink](#)

**Gene Summary:** The protein encoded by this gene is a zinc finger transcription factor and contains an N-terminal POZ domain. This protein acts as a sequence-specific repressor of transcription, and has been shown to modulate the transcription of START-dependent IL-4 responses of B cells. This protein can interact with a variety of POZ-containing proteins that function as transcription corepressors. This gene is found to be frequently translocated and hypermutated in diffuse large-cell lymphoma (DLCL), and may be involved in the pathogenesis of DLCL. Alternatively spliced transcript variants encoding different protein isoforms have been found for this gene. [provided by RefSeq]
