### Gene Information

Entrez GeneID: [7913](#)

Gene Name: DEK

Gene Alias: D6S231E

Gene Description: DEK oncogene

Omim ID: [125264](#)

Gene Ontology: [Hyperlink](#)

**Gene Summary:** This gene encodes a protein with one SAP domain. This protein binds to cruciform and superhelical DNA and induces positive supercoils into closed circular DNA, and is also involved in splice site selection during mRNA processing. Chromosomal aberrations involving this region, increased expression of this gene, and the presence of antibodies against this protein are all associated with various diseases. Two transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq]

Other Designations: DEK oncogene (DNA binding), OTTHUMP00000039357
