### Gene Information

Entrez GeneID: [4602](#)

Gene Name: MYB

Gene Alias: Cmyb,c-myb,c-myb\_CDS,efg

Gene Description: v-myb myeloblastosis viral oncogene homolog (avian)

Omim ID: [189990](#)

Gene Ontology: [Hyperlink](#)

**Gene Summary:** This gene encodes a transcription factor that is a member of the MYB family of transcription factor genes. The protein contains three domains, an N-terminal DNA-binding domain, a central transcriptional activation domain and a C-terminal domain involved in transcriptional repression. This protein plays an essential role in the regulation of hematopoiesis and may play a role in tumorigenesis. Alternative splicing results in multiple transcript variants. [provided by RefSeq]
