Gene Information

Entrez GeneID: [915](#)

Gene Name: CD3D

Gene Alias: CD3-DELTA,T3D

Gene Description: CD3d molecule, delta (CD3-TCR complex)

Omim ID: [186790](#), [600802](#)

Gene Ontology: [Hyperlink](#)

Gene Summary: The protein encoded by this gene is part of the T-cell receptor/CD3 complex (TCR/CD3 complex) and is involved in T-cell development and signal transduction. The encoded membrane protein represents the delta subunit of the CD3 complex, and along with four other CD3 subunits, binds either TCR alpha/beta or TCR gamma/delta to form the TCR/CD3 complex on the surface of T-cells. Defects in this gene are a cause of severe combined immunodeficiency autosomal recessive T-cell-negative/B-cell-positive/NK-cell-positive (SCIDBNK). Two transcript variants encoding different isoforms have been found for this gene. Other variants may also exist, but the full-length nature of their transcripts has yet to be defined.
