Gene Information

Entrez GeneID: [2120](#)

Gene Name: ETV6

Gene Alias: TEL, TEL/ABL

Gene Description: ets variant 6

Omim ID: [131440](#), [600618](#), [601626](#)

Gene Ontology: [Hyperlink](#)

Gene Summary: This gene encodes an ETS family transcription factor. The product of this gene contains two functional domains: a N-terminal pointed (PNT) domain that is involved in protein-protein interactions with itself and other proteins, and a C-terminal DNA-binding domain. Gene knockout studies in mice suggest that it is required for hematopoiesis and maintenance of the developing vascular network. This gene is known to be involved in a large number of chromosomal rearrangements associated with leukemia and congenital fibrosarcoma. [provided by RefSeq]

Other Designations: TEL oncogene, TEL1 oncogene, ets variant gene 6 (TEL oncogene)
