Datasheet

TGFBR3 Split FISH Probe

Catalog Number: FS0051

Regulatory Status: For research use only (RUO)

Product Description: Labeled FISH probes for identification of gene split using Fluorescent In Situ Hybridization Technique. ([Technology](#))

Applications: FISH-Ce
(See our web site product page for detailed applications information)

Protocols: See our web site at <http://www.abnova.com/support/protocols.asp> or product page for detailed protocols

Form: Liquid

Supplied Product: DAPI Counterstain (1500 ng/mL)
125 uL for each 100 uL FISH Probe

Storage Instruction: Store at 4°C in the dark.

Entrez GeneID: 7049

Gene Symbol: TGFBR3

Gene Alias: BGCAN, betaglycan

Gene Summary: Transforming growth factor (TGF)-beta is a multifunctional cytokine that modulates several tissue development and repair processes, including cell differentiation, cell cycle progression, cellular migration, adhesion, and extracellular matrix production. Three TGF-beta forms are encoded by separate genes: TGFB1 (MIM 190180), TGFB2 (MIM 190220), and TGFB3 (MIM 190230). The diverse effects of TGF-beta are mediated by the TGF-beta receptors and cell surface-binding proteins. Three TGF-beta receptors exist: type I (TGFBR1; MIM 190181), type II (TGFBR2; MIM 190182), and type III (TGFBR3). TGFBR3 is a glycoprotein that binds TGFB and exists in both a membrane-bound and a soluble form (Johnson et al., 1995 [PubMed 8530052]).[supplied by OMIM]
