## Datasheet

### LEP (Human) protein

**Catalog Number:** P8868

**Regulation Status:** For research use only (RUO)

**Product Description:** Human LEP (P41159, 22 a.a. - 56 a.a) protein produced synthetically in Human.

**Sequence:** Val-Pro-Ile-Gln-Lys-Val-Gln-Asp-Asp-Thr-Lys-Thr-Leu-Ile-Lys-Thr-Ile-Val-Thr-Arg-Ile-Asn-Asp-Ile-Ser-His-Thr-Gln-Ser-Val-Ser-Ser-Lys-Gln-Lys.

**Host:** Human

**Theoretical MW (kDa):** 3.9506

**Protocols:** See our web site at <http://www.abnova.com/support/protocols.asp> or product page for detailed protocols

**Form:** Lyophilized

**Purity:** > 95% by RP-HPLC.

**Storage Buffer:** Lyophilized from with no additives

**Storage Instruction:** Lyophilized although stable at room temperature. should be stored desiccated below -20°C. Reconstituted Leptin is best stored refrigerated at 4°C.  
Aliquot to avoid repeated freezing and thawing.

**Entrez GeneID:** 3952

**Gene Symbol:** LEP

**Gene Alias:** FLJ94114, OB, OBS

**Gene Summary:** This gene encodes a protein that is secreted by white adipocytes, and which plays a major role in the regulation of body weight. This protein, which acts through the leptin receptor, functions as part of a signaling pathway that can inhibit food intake and/or regulate energy expenditure to maintain constancy of the adipose mass. This protein also has several endocrine functions, and is involved in the regulation of immune and inflammatory responses, hematopoiesis, angiogenesis and wound healing. Mutations in this gene and/or its regulatory regions cause severe obesity, and

morbid obesity with hypogonadism. This gene has also been linked to type 2 diabetes mellitus development. [provided by RefSeq]
