Gene Alias: D12S370, LT-BETA-R, TNF-R-III, TNFCR,
TNFR-RP, TNFR2-RP, TNFRSF3

Gene Summary: The protein encoded by this gene is a
member of the tumor necrosis factor (TNF) family of
receptors. It is expressed on the surface of most cell

types, including cells of epithelial and myeloid lineages,
but not on T and B lymphocytes. The protein specifically
binds the lymphotoxin membrane form (a complex of
lymphotoxin-alpha and lymphotoxin-beta). The encoded
protein and its ligand play a role in the development and
organization of lymphoid tissue and transformed cells.
Activation of the encoded protein can trigger apoptosis.
