#### **Datasheet**

# FOLR2 (Human) Recombinant Protein

Catalog Number: P9814

Regulation Status: For research use only (RUO)

Product Description: Human FOLR2 (P14207,

Thr17-Met228) partial recombinant protein with His tag

at C-Terminus expressed in HEK293 cells.

Sequence: Thr17-Met228

Host: Human

Theoretical MW (kDa): 25.5

Protocols: See our web site at

http://www.abnova.com/support/protocols.asp or product

page for detailed protocols

Form: Lyophilized

Preparation Method: Mammalian cell (HEK293)

expression system

**Purity:** > 95% as determined by Tris-Bis PAGE; > 95%

as determined by HPLC

Endotoxin Level: < 1 EU per 1 ug of protein

(determined by LAL method)

Activity: The EC<sub>50</sub> was 4.1 ng/mL, messured by ELISA

at 0.2 ug/mL.

Recommend Usage: Biological Activity

ELISA

SDS-PAGE

The optimal working dilution should be determined by

the end user.

Storage Buffer: Lyophilized from sterile distilled Water

is > 100 ug/mL

**Storage Instruction:** Store at 2°C to 8°C for 1 week. For long term storage, aliquot and store at -20°C to

-80°C.

Aliquot to avoid repeated freezing and thawing.

Entrez GenelD: 2350

Gene Symbol: FOLR2

[provided by RefSeq]

Gene Alias: BETA-HFR, FBP/PL-1, FR-BETA, FR-P3

Gene Summary: The protein encoded by this gene is a member of the folate receptor (FOLR) family, and these genes exist in a cluster on chromosome 11. Members of this gene family have a high affinity for folic acid and for several reduced folic acid derivatives, and they mediate delivery of 5-methyltetrahydrofolate to the interior of cells. This protein has a 68% and 79% sequence homology with the FOLR1 and FOLR3 proteins, respectively. Although this protein was originally thought to be specific to placenta, it can also exist in other tissues, and it may play a role in the transport of methotrexate in synovial macrophages in rheumatoid arthritis patients. Multiple transcript variants that encode the same protein have been found for this gene.
