Entrez GeneID: 3556

Gene Symbol: IL1RAP

Gene Alias: C3orf13, FLJ37788, IL-1RAcP, IL1R3

Gene Summary: Interleukin 1 induces synthesis of acute phase and proinflammatory proteins during infection, tissue damage, or stress, by forming a complex at the cell membrane with an interleukin 1 receptor and an accessory protein. This gene encodes an interleukin 1 receptor accessory protein. Alternative splicing of this gene results in two transcript variants encoding two different isoforms, one membrane-bound and one soluble. [provided by RefSeq]
