## **Datasheet**

# ERBB2 recombinant monoclonal antibody, clone R03-6A8

Catalog Number: RAB01673

Regulatory Status: For research use only (RUO)

**Product Description:** Rabbit recombinant monoclonal antibody raised against synthetic phosphopeptide corresponding to residues surrounding Tyr1248 of

human ErbB 2.

Clone Name: R03-6A8

**Immunogen:** Original antibody is raised against a synthetic phosphopeptide corresponding to residues

surrounding Tyr1248 of human ErbB 2

Theoretical MW (kDa): Calculated MW: 138 k

Antibody Species: Rabbit

Protocols: See our web site at

http://www.abnova.com/support/protocols.asp or product

page for detailed protocols

Form: Liquid

**Purification:** Affinity purification

Isotype: IgG

Recommend Usage: Immunoprecipitation (1:20)

Western Blot (1:500-1:1,000)

The optimal working dilution should be determined by

the end user.

 $\begin{tabular}{ll} \textbf{Storage Buffer:} In 50 mM Tris-Glycine, pH 7.4 (0.15 M NaCl, 40% Glycerol, 0.01% Sodium azide and 0.05% \\ \end{tabular}$ 

BSA)

Storage Instruction: Store at 4°C for short term. For

long term storage store at -20°C.

Aliquot to avoid repeated freezing and thawing.

Entrez GenelD: 2064

Gene Symbol: ERBB2

Gene Alias: CD340, HER-2, HER-2/neu, HER2, NEU,

NGL, TKR1

Gene Summary: This gene encodes a member of the epidermal growth factor (EGF) receptor family of receptor tyrosine kinases. This protein has no ligand binding domain of its own and therefore cannot bind growth factors. However, it does bind tightly to other ligand-bound EGF receptor family members to form a heterodimer, stabilizing ligand binding and enhancing kinase-mediated activation of downstream signalling pathways, such as those involving mitogen-activated protein kinase and phosphatidylinositol-3 kinase. Allelic variations at amino acid positions 654 and 655 of isoform a (positions 624 and 625 of isoform b) have most common been reported, with the Ile654/Ile655, shown here. Amplification overexpression of this gene has been reported in numerous cancers, including breast and ovarian tumors. Alternative splicing results in several additional transcript variants, some encoding different isoforms and others that have not been fully characterized. [provided by RefSeq1
