Entrez GeneID: 3665

Gene Symbol: IRF7

Gene Alias: IRF-7H, IRF7A

Gene Summary: IRF7 encodes interferon regulatory

factor 7, a member of the interferon regulatory transcription factor (IRF) family. IRF7 has been shown to play a role in the transcriptional activation of virus-inducible cellular genes, including interferon beta chain genes. Inducible expression of IRF7 is largely restricted to lymphoid tissue. Multiple IRF7 transcript variants have been identified, although the functional consequences of these have not yet been established. [provided by RefSeq]
