**Entrez GeneID:** 26230

**Gene Symbol:** TIAM2

**Gene Alias:** FLJ41865, STEF

**Gene Summary:** This gene encodes a guanine nucleotide exchange factor. A highly similar mouse

protein specifically activates ras-related C3 botulinum substrate 1, converting this Rho-like guanosine triphosphatase (GTPase) from a guanosine diphosphate-bound inactive state to a guanosine triphosphate-bound active state. The encoded protein may play a role in neural cell development. Alternatively spliced transcript variants encoding different isoforms have been described. [provided by RefSeq]
