Entrez GeneID: 3659

Gene Symbol: IRF1

Gene Alias: IRF-1, MAR

Gene Summary: IRF1 encodes interferon regulatory

factor 1, a member of the interferon regulatory transcription factor (IRF) family. IRF1 serves as an activator of interferons alpha and beta transcription, and in mouse it has been shown to be required for double-stranded RNA induction of these genes. IRF1 also functions as a transcription activator of genes induced by interferons alpha, beta, and gamma. Further, IRF1 has been shown to play roles in regulating apoptosis and tumor-suppression.
