Entrez GeneID: 1385

Gene Symbol: CREB1

Gene Alias: CREB, MGC9284

Gene Summary: This gene encodes a transcription

factor that is a member of the leucine zipper family of DNA binding proteins. This protein binds as a homodimer to the cAMP-responsive element, an octameric palindrome. The protein is phosphorylated by several protein kinases, and induces transcription of genes in response to hormonal stimulation of the cAMP pathway. Alternate splicing of this gene results in two transcript variants encoding different isoforms. [provided by RefSeq]
