Entrez GeneID: 3336

Gene Symbol: HSPE1

Gene Alias: CPN10, GROES, HSP10

Gene Summary: This gene encodes a major heat shock

protein which functions as a chaperonin. Its structure consists of a heptameric ring which binds to another heat shock protein in order to form a symmetric, functional heterodimer which enhances protein folding in an ATP-dependent manner. This gene and its co-chaperonin, HSPD1, are arranged in a head-to-head orientation on chromosome 2. [provided by RefSeq]
