Entrez GeneID: 3717

Gene Symbol: JAK2

Gene Alias: JTK10

Gene Summary: This gene product is a protein tyrosine kinase involved in a specific subset of cytokine receptor

signaling pathways. It has been found to be constitutively associated with the prolactin receptor and is required for responses to gamma interferon. Mice that do not express an active protein for this gene exhibit embryonic lethality associated with the absence of definitive erythropoiesis. [provided by RefSeq]
