Gene Symbol: DSTN

Gene Alias: ACTDP, ADF, bA462D18.2

Gene Summary: The product of this gene belongs to

the actin-binding proteins ADF family. This family of proteins is responsible for enhancing the turnover rate of actin in vivo. This gene encodes the actin depolymerizing protein that severs actin filaments (F-actin) and binds to actin monomers (G-actin). Two transcript variants encoding distinct isoforms have been identified for this gene. [provided by RefSeq]
