**Entrez GeneID:** 2558

**Gene Symbol:** GABRA5

**Gene Alias:** MGC138184

**Gene Summary:** GABA is the major inhibitory

neurotransmitter in the mammalian brain where it acts at GABA-A receptors, which are ligand-gated chloride channels. Chloride conductance of these channels can be modulated by agents such as benzodiazepines that bind to the GABA-A receptor. At least 16 distinct subunits of GABA-A receptors have been identified. Transcript variants utilizing three different alternative non-coding first exons have been described. [provided by RefSeq]
