Datasheet

McCoy's 5A Medium

Storage Instruction: Store at 2-8°C. Protect from light.

Catalog Number: U0611

Regulation Status: For research use only (RUO)

Product Description: McCoy's 5A Medium is used in the culture of primary cells, such as bone marrow, skin, gingiva, kidney, spleen, lung, rat embryo, omentum, and also used for tissue biopsy culture, the establishment of cell line, and the culture of some lymphocytes and more difficult cells.

Formulation: Contains 1.5 mM L-glutamine, 3000 mg/L D-glucose, and 10 mg/L phenol red.

No HEPES.

No sodium pyruvate.

No sodium bicarbonate.

Medium Preparation: 1. The net weight of this product is 10.58 g, which can prepare 1 L McCoy's 5A culture medium.

2. Prepare about 900 mL ultrapure water in a container, then add a bag of McCoy's 5A Medium into the container, and wash out the residual powder in the bag with 50 mL ultrapure water.

3. Stir for 30 mins to dissolve all ingredients completely. After the solution is clear, add 2.2 g NaHCO₃ and continue stirring for 5-10 mins until dissolved.

4. Add ultrapure water to adjust the volume to 1 L.

5. If necessary, adjust the pH to 7.20-7.30 with 1 mol/L NaOH solution or 1 mol/L HCl solution. Since filtration will slightly increase the pH, the pH value here is lower than the target pH value (7.20-7.40).

6. The prepared solution should be sterilized using a 0.2 µm pore size filter membrane under positive pressure (ensure aseptic technique).

7. After filtration, a small amount of liquid culture medium can be taken for quality inspection, only after it passes the test can it be used further. When stored at 2-8°C with shading light, the liquid medium has a shelf life of 1 year.

Regulatory Status: For research use only (RUO)

Protocols: See our web site at <http://www.abnova.com/support/protocols.asp> or product page for detailed protocols

Form: Lyophilized
