Cat#: HF-707

Description: Normal Human Tonsil Frozen Sections

Normal Human Tonsil Frozen Sections are made of freshly harvested tissues, snapped frozen in OCT blocks, sectioned at a thickness of 7-10microns and mounted on positively charged slides (1 section per slide).

Quality Control: Tissue sections are H&E stained and examined by histologists with 25 years of experience to be sure of excellent morphology and high quality.

Applications: Frozen tissue sections are prepared in RNase-, DNase-, and protease-free environment and are ideal for immunohistochemistry and in situ hybridization.

Packing/shipping: Frozen sections are shipped in tightly closed slide boxes or slide mailers on dry ice and are good for one year correctly stored .
