## MiniPig Brain - Cerebral Cortex Total RNA

**Code:** NR-210

**Qty:** 0.1mg

**Description:** Total RNA is isolated from freshly harvested Mini Pig brain tissue of single normal animal using classical guanidine isothiocyanate–phenol:chloroform extraction method which allows the rapid isolation of total RNA including microRNAs. RNA is treated with RNase-free DNase to remove residual DNA, precisely quantified, and stored at -80°C.

**Quality Control:** The integrity of RNA sample as indicated by intact ribosomal RNA is verified by denatured agarose gel electrophoresis. The purity of RNA is assessed by spectrophotometer (A260/A280: 1.9-2.1). Residual DNA contamination is tested by PCR.

**Applications:** Reference RNA is ideal for microarray analysis, Northern blotting, ribonuclease protection assay, SI nuclease assay, RT-PCR/Q-PCR/RACE analysis, cDNA synthesis, RNA differential display, microRNA studies, and purification of mRNA for library construction.

**Packing/shipping:** Total RNA sample is routinely provided in RNase-free water at a concentration of 1 mg/ml and shipped on dry ice. Total RNA is guaranteed for one year from date of purchase if stored correctly.
