PA1002b

Pancreas cancer tissue array for antibody screening, with normal tissue, including TNM and pathology grade, TNM and clinical stage, 50 cases/100 cores, replacing PA1002a

1. TMA slides were sectioned and stored at 4°C and may not be fresh cut, but still suitable for IHC.

Please request fresh cut if experiment involves phospho-specific antibodies, RNA studies, FISH or ISH, etc.

A minimum of 3 slides per TMA must be purchased to cover the cost of trimming for fresh sectioning. 2.

Most TMA slides were not coated with an extra layer of paraffin (tissue cores can be easily seen on the glass).

To prevent tissue detachment during antigen retrieval, unbaked slides must be baked for at least 30 to 120

minutes at 60°C. before putting into xylene for de-paraffinization. Baked slides were sent out baked for 2 hours.

Pos.	Age	Sex	Organ/Anatomic Site	Pathology diagnosis	TNM	Grade	Stage	Type
