Description of Target	VASH1 is the angiogenesis inhibitor. It inhibits migration, proliferation and network formation by endothelial cells as well as angiogenesis. This inhibitory effect is selective to endothelial cells as it does not affect the migration of smooth muscle cells or fibroblasts. VASH1 does not affect the proliferation of cancer cells in vitro, but inhibits tumor growth and tumor angiogenesis. It acts in an autocrine manner. VASH1 inhibits artery neointimal formation and macrophage infiltration. Western blots using two different antibodies against two unique regions of this protein target confirm the same apparent molecular weight in our tests.
Protein Interactions	DHPS; CCDC23;
Reconstitution and Storage	All conjugated antibodies should be stored in light-protected vials or covered with a light protecting material (i.e. aluminum foil). Conjugated antibodies are stable for at least 12 months at 4C. If longer storage is desired (24 months), conjugates may be diluted with up to 50% glycerol and stored at -20C to -80C. Freezing and thawing conjugated antibodies will compromise enzyme activity as well as antibody binding.
