Description of Target	Phototransduction in rod and cone photoreceptors is regulated by groups of signaling proteins. GNGT2 is thought to play a crucial role in cone phototransduction. It belongs to the G protein gamma family and localized specifically in cones. Phototransduction in rod and cone photoreceptors is regulated by groups of signaling proteins. The encoded protein is thought to play a crucial role in cone phototransduction. It belongs to the G protein gamma family and localized specifically in cones. There is evidence for use of multiple polyadenylation sites by this gene.
Protein Interactions	GNB2; GNB3; GNB1; KCNJ4; GNB4;
Reconstitution and Storage	All conjugated antibodies should be stored in light-protected vials or covered with a light protecting material (i.e. aluminum foil). Conjugated antibodies are stable for at least 12 months at 4C. If longer storage is desired (24 months), conjugates may be diluted with up to 50% glycerol and stored at -20C to -80C. Freezing and thawing conjugated antibodies will compromise enzyme activity as well as antibody binding.
