Description of Target	AMPH is a protein associated with the cytoplasmic surface of synaptic vesicles. A subset of patients with stiff-man syndrome who were also affected by breast cancer are positive for autoantibodies against this protein. This gene encodes a protein associated with the cytoplasmic surface of synaptic vesicles. A subset of patients with stiff-man syndrome who were also affected by breast cancer are positive for autoantibodies against this protein. Alternate splicing of this gene results in two transcript variants encoding different isoforms. Additional splice variants have been described, but their full length sequences have not been determined.
Protein Interactions	PPP3CC; ARL16; CCDC67; DNMT1; UBC; DNMT2; AP2A1; MANEA; DYRK1A; CDK5; TERF1; Ppp3cb; REPS1; SGIP1; HCVgp1; SYNM; KHDRBS1; REPS2; SYNJ1; TP73; ITSN1; JUN; CLTC; AP2B1; ITSN2; MAPK6; TNK2; SH3GLB1; CABIN1; AP2A2; SH3GL2; CDK5R1; PLD2; BIN1; AMPH; SYN1; VTN; C
Reconstitution and Storage	All conjugated antibodies should be stored in light-protected vials or covered with a light protecting material (i.e. aluminum foil). Conjugated antibodies are stable for at least 12 months at 4C. If longer storage is desired (24 months), conjugates may be diluted with up to 50% glycerol and stored at -20C to -80C. Freezing and thawing conjugated antibodies will compromise enzyme activity as well as antibody binding.
