| Description of Target                          | The protein encoded by this gene is a small cellular or pericellular matrix proteoglycan that is closely related in structure to two other small proteoglycans, decorin and fibromodulin. The encoded protein and decorin are thought to be the result of a gene.  |
| Protein Interactions                           | WISP1; TNF; TGFB1; PLA2G1B; MFAP2; ELN; DAG1; COL1A2; COL1A1; COL2A1; COL4A2; BMP4; APOB; APP; SGCA; JPH3; HDL3; CHRD;   |
| Reconstitution and Storage                     | All conjugated antibodies should be stored in light-protected vials or covered with a light protecting material (i.e. aluminum foil). Conjugated antibodies are stable for at least 12 months at 4C. If longer storage is desired (24 months), conjugates may be diluted with up to 50% glycerol and stored at -20C to -80C. Freezing and thawing conjugated antibodies will compromise enzyme activity as well as antibody binding. |
