Product Format	Liquid. Purified antibody supplied in 1x PBS buffer.
Description of Target	PGM1 is an isozyme of phosphoglucomutase (PGM) and belongs to the phosphohexose mutase family. There are several PGM isozymes, which are encoded by different genes and catalyze the transfer of phosphate between the 1 and 6 positions of glucose. In most cell types, this PGM isozyme is predominant, representing about 90% of total PGM activity. In red cells, PGM2 is a major isozyme. This gene is highly polymorphic. Mutations in this gene cause glycogen storage disease type 14.
Protein Interactions	FUS; UBC; PAXIP1; FUBP1; TALDO1; MDH1; FH; APP; GRHPR; NIT2; PGM2; USP4; TERF2IP; TINF2; POT1; TERF1; UBA5; S100B; S100A1;
Reconstitution and Storage	All conjugated antibodies should be stored in light-protected vials or covered with a light protecting material (i.e. aluminum foil). Conjugated antibodies are stable for at least 12 months at 4C. If longer storage is desired (24 months), conjugates may be diluted with up to 50% glycerol and stored at -20C to -80C. Freezing and thawing conjugated antibodies will compromise enzyme activity as well as antibody binding.
