<b>Peptide Sequence</b>	Synthetic peptide located within the following region: <a href="#">KERILADKSLATRTDQDSRTALHWACSAHGTEIVEFLQLGVPVNDKDDA</a>
<b>Product Format</b>	Liquid. Purified antibody supplied in 1x PBS buffer.
<b>Description of Target</b>	Psm10 acts as a chaperone during the assembly of the 26S proteasome, specifically of the PA700/19S regulatory complex (RC). In the initial step of the base subcomplex assembly, Psm10 is part of an intermediate PSMD10:PSMC4:PSMC5:PAAF1 module which probably assembles with a PSMD5:PSMC2:PSMC1:PSMD2 module. By similarity, Psm10 acts as an oncoprotein by being involved in negative regulation of tumor suppressors RB1 and p53/TP53. Overexpression of this gene is leading to phosphorylation of RB1 and proteasomal degradation of RB1. Psm10 regulates CDK4-mediated phosphorylation of RB1 by competing with CDKN2A for binding with CDK4.
<b>Protein Interactions</b>	Psnc4; Rb1; Cebpa; Cdk4;
<b>Reconstitution and Storage</b>	All conjugated antibodies should be stored in light-protected vials or covered with a light protecting material (i.e. aluminum foil). Conjugated antibodies are stable for at least 12 months at 4C. If longer storage is desired (24 months), conjugates may be diluted with up to 50% glycerol and stored at -20C to -80C. Freezing and thawing conjugated antibodies will compromise enzyme activity as well as antibody binding.
