Description of Target	The protein encoded by this gene is a member of the protein tyrosine phosphatase (PTP) family. PTPs are known to be signaling molecules that regulate a variety of cellular processes including cell growth, differentiation, mitotic cycle, and oncogenic transformation. This PTP contains two tandem Src homology-2 domains, which function as phospho-tyrosine binding domains and mediate the interaction of this PTP with its substrates. This PTP is widely expressed in most tissues and plays a regulatory role in various cell signaling events that are important for a diversity of cell functions, such as mitogenic activation, metabolic control, transcription regulation, and cell migration. Mutations in this gene are a cause of Noonan syndrome as well as acute myeloid leukemia.
Protein Interactions	TRIM32; RPIA; UBC; NEDD8; SUMO1; MTPN; EFHD2; CHRAC1; OXCT1; MAPK14; GRB2; Siglece; GAB2; GAB1; VCAM1; CD274; IQCB1; IRS1; ERBB2; EGFR; FASN; RFWD2; FRS2; PPIF; GSK3B; CRK; PIK3R2; PIK3R1; MAP3K5; LRRK1; CSF2RBP1; FYN; CBL; SOCS3; CXCR4; MYC; INPP5D; IL6S
Reconstitution and Storage	All conjugated antibodies should be stored in light-protected vials or covered with a light protecting material (i.e. aluminum foil). Conjugated antibodies are stable for at least 12 months at 4C. If longer storage is desired (24 months), conjugates may be diluted with up to 50% glycerol and stored at -20C to -80C. Freezing and thawing conjugated antibodies will compromise enzyme activity as well as antibody binding.
