| Description of Target                          | Myosins are actin-based motor molecules with ATPase activity. Unconventional myosins serve in intracellular movements. Their highly divergent tails are presumed to bind to membranous compartments, which would be moved relative to actin filaments.   |
| Protein Interactions                           | SUMO3; RPA3; RPA2; RPA1; OGFOD1; STK26; ISOC1; MCTS1; PROSC; PDIA4; ATIC; ASNS; YWHAH; SNRPF; PAFAH1B1; TBCB; CAPNS1; PAN2; UBC; RNF20; MYH11; MOV10; ILF3; DTNA; DIAPH1; CUL1; SPI1; EMD; ACTB;   |
| Reconstitution and Storage                     | All conjugated antibodies should be stored in light-protected vials or covered with a light protecting material (i.e. aluminum foil). Conjugated antibodies are stable for at least 12 months at 4C. If longer storage is desired (24 months), conjugates may be diluted with up to 50% glycerol and stored at -20C to -80C. Freezing and thawing conjugated antibodies will compromise enzyme activity as well as antibody binding. |
