Product Format	Liquid. Purified antibody supplied in 1x PBS buffer.
Description of Target	TESC functions as an integral cofactor in cell pH regulation by controlling plasma membrane-type Na ⁺ /H ⁺ exchange activity. It promotes the maturation, transport, cell surface stability and exchange activity of SLC9A1/NHE1 at the plasma membrane and promotes the induction of hematopoietic stem cell differentiation toward megakaryocytic lineage. It is essential for the coupling of ERK cascade activation with the expression of ETS family genes in megakaryocytic differentiation. It is also involved in granulocytic differentiation in a ERK-dependent manner and inhibits the phosphatase activity of calcineurin.
Protein Interactions	WBP11; UBC; CCDC91; HMG20A; TESC; RAI1; DYNLT3; SLC9A1;
Reconstitution and Storage	All conjugated antibodies should be stored in light-protected vials or covered with a light protecting material (i.e. aluminum foil). Conjugated antibodies are stable for at least 12 months at 4C. If longer storage is desired (24 months), conjugates may be diluted with up to 50% glycerol and stored at -20C to -80C. Freezing and thawing conjugated antibodies will compromise enzyme activity as well as antibody binding.
