Product Format	Liquid. Purified antibody supplied in 1x PBS buffer.
Description of Target	EIF5A2 is a mRNA-binding protein involved in translation elongation. EIF5A2 has an important function at the level of mRNA turnover, probably acting downstream of decapping. EIF5A2 is involved in actin dynamics and cell cycle progression, mRNA decay and probably in a pathway involved in stress response and maintenance of cell wall integrity. EIF5A2 functions as a regulator of apoptosis. EIF5A2 mediates effects of polyamines on neuronal process extension and survival. EIF5A2 may play an important role in brain development and function, and in skeletal muscle stem cell differentiation.
Protein Interactions	NIF3L1; CDC23; SDCBP; REL; DHPS; FAM96B; UBC; MDM2; PTBP2; RAB30; CUL3; CUL4B; CDK2; VHL; OPTN; DCC;
Reconstitution and Storage	All conjugated antibodies should be stored in light-protected vials or covered with a light protecting material (i.e. aluminum foil). Conjugated antibodies are stable for at least 12 months at 4C. If longer storage is desired (24 months), conjugates may be diluted with up to 50% glycerol and stored at -20C to -80C. Freezing and thawing conjugated antibodies will compromise enzyme activity as well as antibody binding.
