Product Format	Liquid. Purified antibody supplied in 1x PBS buffer.
Description of Target	Pa2g4 may play a role in a ERBB3-regulated signal transduction pathway. It seems be involved in growth regulation. It acts a corepressor of the androgen receptor (AR) and is regulated by the ERBB3 ligand neuregulin-1/heregulin (HRG). It inhibits transcription of some E2F1-regulated promoters, probably by recruiting histone acetylase (HAT) activity. It may be involved in ribosome assembly. It mediates cap-independent translation of specific viral IRESs (internal ribosomal entry site). It together with PTBP1 is required for the translation initiation on the foot-and-mouth disease virus (FMDV) IRES.
Protein Interactions	Pik3r1; STUB1; HSPA4;
Reconstitution and Storage	All conjugated antibodies should be stored in light-protected vials or covered with a light protecting material (i.e. aluminum foil). Conjugated antibodies are stable for at least 12 months at 4C. If longer storage is desired (24 months), conjugates may be diluted with up to 50% glycerol and stored at -20C to -80C. Freezing and thawing conjugated antibodies will compromise enzyme activity as well as antibody binding.
