Product Format	Liquid. Purified antibody is supplied in high phosphate PBS, 100 mM phosphate, 150 mM NaCl, pH 7.6.
Description of Target	Preb was first identified based on its probable role in the regulation of pituitary gene transcription. It binds to the prolactin gene (PRL) promoter and seems to activate transcription. Guanine nucleotide exchange factor that activates SARA2. It is also required for the formation of COPII transport vesicles from the ER.
Protein Interactions	PREB; Ssbp4; Trip13; TGFBR1;
Reconstitution and Storage	All conjugated antibodies should be stored in light-protected vials or covered with a light protecting material (i.e. aluminum foil). Conjugated antibodies are stable for at least 12 months at 4C. If longer storage is desired (24 months), conjugates may be diluted with up to 50% glycerol and stored at -20C to -80C. Freezing and thawing conjugated antibodies will compromise enzyme activity as well as antibody binding.
