Product Format	Liquid. Purified antibody supplied in 1x PBS buffer.
Description of Target	The protein encoded by this gene is a member of the tripartite motif (TRIM) family. The TRIM motif includes three zinc-binding domains, a RING, a B-box type 1 and a B-box type 2, and a coiled-coil region. The protein localizes to the cytoplasm. The presence of potential DNA-binding and dimerization-transactivation domains suggests that this protein may act as a transcription factor, similar to several other members of the TRIM family. Expression of the gene is upregulated in response to estrogen, and it is thought to mediate estrogen actions in breast cancer as a primary response gene.
Protein Interactions	UBC; DDX58; SUMO2; AMFR; UBE2D1; SUMO1; PCNA; USP15; UBA1; RPS27A; RPA1; KIF5B; HSPA1L; HSPA1B; HSPA1A; EEF1A2; ACLY; SUZ12; RNF2; EZH2; BMI1; HECW2; TRIM25; TRIM8; TFG; GRIK2; ESR1; OTUB2; USP39; VCP; WARS; UAP1; UBXN6; UBE2S; UBE2D2; TRAF6; ISG15; UBE2D
Reconstitution and Storage	All conjugated antibodies should be stored in light-protected vials or covered with a light protecting material (i.e. aluminum foil). Conjugated antibodies are stable for at least 12 months at 4C. If longer storage is desired (24 months), conjugates may be diluted with up to 50% glycerol and stored at -20C to -80C. Freezing and thawing conjugated antibodies will compromise enzyme activity as well as antibody binding.
