Description of Target	JMJD5 is a histone lysine demethylase. Studies of a similar protein in mouse indicate a potential role for this protein as a tumor suppressor. JMJD5 is a putative histone lysine demethylase that contains a Jumonji C (JmjC) domain (Shi, 2007 [PubMed 17909537]). [supplied by OMIM].
Protein Interactions	PCYT2;
Reconstitution and Storage	All conjugated antibodies should be stored in light-protected vials or covered with a light protecting material (i.e. aluminum foil). Conjugated antibodies are stable for at least 12 months at 4C. If longer storage is desired (24 months), conjugates may be diluted with up to 50% glycerol and stored at -20C to -80C. Freezing and thawing conjugated antibodies will compromise enzyme activity as well as antibody binding.
