Description of Target	BPGM belongs to the phosphoglycerate mutase family, BPG-dependent PGAM subfamily. It plays a major role in regulating hemoglobin oxygen affinity as a consequence of controlling 2,3-BPG concentration. It can also catalyze the reaction of EC 5.4.2.1 (mutase) and EC 3.1.3.13 (phosphatase), but with a reduced activity.
Protein Interactions	UBC; EHD2; ATF6; NEK3; EGR2; CEL; ATP4B; SPEN; GRB2; AKT1; GAPDH;
Reconstitution and Storage	All conjugated antibodies should be stored in light-protected vials or covered with a light protecting material (i.e. aluminum foil). Conjugated antibodies are stable for at least 12 months at 4C. If longer storage is desired (24 months), conjugates may be diluted with up to 50% glycerol and stored at -20C to -80C. Freezing and thawing conjugated antibodies will compromise enzyme activity as well as antibody binding.
