Product Format	Liquid. Purified antibody supplied in 1x PBS buffer.
Description of Target	H1FNT is essential for normal spermatogenesis and male fertility. It is required for proper cell restructuring and DNA condensation during the elongation phase of spermiogenesis. It is involved in the histone-protamine transition of sperm chromatin and the subsequent production of functional sperm. H1FNT binds both double-stranded and single-stranded DNA, ATP and protamine-1.
Reconstitution and Storage	All conjugated antibodies should be stored in light-protected vials or covered with a light protecting material (i.e. aluminum foil). Conjugated antibodies are stable for at least 12 months at 4C. If longer storage is desired (24 months), conjugates may be diluted with up to 50% glycerol and stored at -20C to -80C. Freezing and thawing conjugated antibodies will compromise enzyme activity as well as antibody binding.
