| Description of Target                          | SYCP3 is a component of the transverse filaments of synaptonemal complexes (SCS), formed between homologous chromosomes during meiotic prophase. It has an essential meiotic function in spermatogenesis. SYCP3 may be important for testis development.   |
| Protein Interactions                           | LIG4; PABPC1; REC8; SMC3; SMC1A;   |
| Reconstitution and Storage                     | All conjugated antibodies should be stored in light-protected vials or covered with a light protecting material (i.e. aluminum foil). Conjugated antibodies are stable for at least 12 months at 4C. If longer storage is desired (24 months), conjugates may be diluted with up to 50% glycerol and stored at -20C to -80C. Freezing and thawing conjugated antibodies will compromise enzyme activity as well as antibody binding. |
